

John Godwin Signature
Crappie Tower Assembly

1. Insert all short (46") limbs into 20" trunk: insert one limb at a time into outer V-shape and **angle tip down slightly** as you insert into V-shape directly across trunk.
2. Secure 60" trunk to coupler with four 1" screws. Be sure the trunk is positioned upright where slits appear as "V" shapes.
3. Insert long (60") limbs into 60" trunk section.

Weighting: A block adapter (vertical placement) or cable kit (horizontal placement) to attach a concrete block is recommended for secure placement and is sold separately. Concrete block is not included. Product may lean, which mimics trees in a water habitat environment. This does not affect the product's performance.

Do not place in swimming or boating areas. Check your local game laws. See product assembly online at MossbackFishHabitat.com.
