

DOCK PREDATOR PREY COMBO TREE (24 lbs.)

One 60" Predator Prey Combo Tree trunk, nine 46" limbs, nine 60" limbs, one cable kit

1. Insert nine long (60") limbs into the bottom portion of trunk: insert one limb at a time into outer V-shape and **angle tip down slightly** as you insert into V-shape directly across trunk.
2. Insert nine short (46") limbs into the top portion of trunk.
3. Wrap the **chain** around any part of the dock frame that is structurally sound. Secure with **quick link**. **Do NOT wrap the cable around the dock structure** - it can cause damage to the cable and/or your dock over time. Cable kits will add at least 5 feet of depth to your vertical product. Depending on placement, the attached chain can also add additional depth. If you want to adjust the depth, do so *only by adjusting the chain* - **not wrapping the cable**. Depth can also vary if the product is hung from a support that is close to or far from the water.

For deeper placement we recommend our depth extender (sold separately).
