

The MOSSBACK DIFFERENCE

Over a decade ago, MossBack Fish Habitat brought the first fish structure product of its kind to the market and has proven itself the most effective fish habitat ever since! What makes MossBack the BEST artificial habitat? *SHAPE* and *TEXTURE*.

V-Shape limbs are TEXTURED on ALL SIDES.
The unique V-shape design makes inserting the limbs **QUICK** and **EASY**—assembles in minutes!

DEEP V-SHAPE continually collects and holds sediment while Periphyton begins to securely “stick” to the texture on **ALL SIDES** of the limbs.

Over time Periphyton continues to grow which **INCREASES** the habitat’s surface area and produces **LIVING SHADE** for your fish.

Our one-of-a-kind V-shape limbs are scientifically designed to collect sediment and grow Periphyton, which transforms our habitat into the *initial food source* for your fish population’s food chain. No other limb on the market compares with the depth and shape of this limb.

ALL side of these unique limbs are textured, which allows Periphyton to “stick” securely to the limb. This Periphyton continues to grow over time, which *increases surface area* and produces *living shade* for your fish. This limb texture was originated by MossBack and is *vital* for sustainable Periphyton growth.

Habitat shouldn’t take hours to assemble! Assembling MossBack Fish Habitat is *fast, easy* and *mess-free*! Our products assemble in a fraction of the time of our competitors’ products!

Our habitat was designed specifically to *virtually eliminate* angler hang-ups! You can fish without frustration with MossBack Fish Habitat!
