

John Godwin Signature

CRAPPIE TOWER (29 lbs.)

One 20" trunk, one 60" trunk, one 8" coupler, eight 1" screws, nine 46" limbs, twelve 60" limbs

1. Insert all short (46") limbs into 20" trunk: insert one limb at a time into outer V-shape and **angle tip down slightly** as you insert into V-shape directly across trunk.
2. Secure 60" trunk to coupler with four 1" screws. Be sure the trunk is positioned upright where slits appear as "V" shapes.
3. Insert long (60") limbs into 60" trunk section.

Weighting: A block adapter (for vertical placement) or laydown cable kit (for horizontal placement) to attach a concrete block is recommended for secure placement and is sold separately. Concrete block is not included. Product may lean, which mimics trees in a water habitat environment. This does not affect the product's performance.
