

CRAWFISH CONDO (28 lbs.)

Twelve 20" Crawfish trunks, two 30" limbs, four 23" limbs

1. Slide four trunks on one 30" limb, using the lower V-shape closest to the bottom of the trunk.

TIP: *When one limb is in, place it vertically on the ground and slide the remaining three trunks down onto it. Let gravity do the work!*

2. Repeat step 1. You should now have two identical structures.
3. Insert four 23" limbs vertically into V-cuts on one of the identical structures.
4. Slide remaining four trunks onto vertical limbs using the top V-shape closest to the top of the trunk.
5. Slide other identical structure onto the four vertical limbs.

TIP: *(1) Start at an angle, inserting all four trunks through V-shapes on one side of the trunks.*

(2) Tilt identical structure forward to ensure tips of limbs are visible and aligned to all limb slots. Then push down from the back and slide down.

6. If you choose to weight the product, we recommend the use of a Laydown Cable Kit (sold separately) and one concrete block. Connect the Laydown Cable Kit around one of the center limbs. Connect the stainless-steel chain and quick link around the concrete block.
